Dear Federal Communications Commission:

As you consider the conditional approval for LightSquared, I write to ask you to preserve the integrity of the nation's GPS system.

Last year, the federal government shut down the Loran navigation system, making recreational mariners solely reliant on GPS for all electronic navigation needs. Like so many other GPS users around the country, GPS is now integrated into our daily outings, and we look to the FCC to protect the integrity of the GPS signal.

Sincerely,

Douglas Paddock

Dear Federal Communications Commission:

Hedge fund manager Phil Falcone and his Harbinger Partners have been involved with "a series of odd procedural decisions at an independent regulatory agency — the Federal Communications Commission — that appear to have been undertaken solely for the financial benefit of one individual.

These process decisions, series of contacts, apparent appearances of impropriety, and potential conflicts of interest seem to reveal improper influence peddling before the Executive Branch, Office of Science and Technology Policy (OSTP), and the Federal Communications Commission.

Falcone's getting government approval of Harbinger/LightSquared buying Sky Terra in just five days instead of the normal 180 days, and in other ways having obstacles conveniently removed just does not seem like a Coincidence.

We are talking about Falcone, a long and large contributor to the Republican Party, suddenly contributing the max to Democrats instead. They're talking about his wife doing the same thing. They're talking about Ahuja doing the same thing. Coincidence?

We are talking about Harbinger hiring the Palmetto lobbying group, a firm that employs lobbyist Steve Glaze. In a shocking coincidence — who would have known? — Steve Glaze is married to Terri Glaze, a senior staffer at the FCC. Only a complete cynic would think that his employment and her decisions or influence were in any way linked.

But more importantly, as you consider the conditional approval for LightSquared, I write to ask you to preserve the integrity of the nation's GPS system.

Last year, the federal government shut down the Loran navigation system, making recreational mariners solely reliant on GPS for all electronic navigation needs. Like so many other GPS users around the country, GPS is now integrated into our daily outings, and we look to the FCC to protect the integrity of the GPS signal.

Sincerely,

Charles Ball

Dear Federal Communications Commission:

As you consider the conditional approval for LightSquared, I write to ask you to preserve the integrity of the nation's GPS system.

Last year, the federal government shut down the Loran navigation system, making recreational mariners solely reliant on GPS for all electronic navigation needs. Like so many other GPS users around the country, GPS is now integrated into our daily outings, and we look to the FCC to protect the integrity of the GPS signal.

I work for the Office of Personnel Management at Ft. Meade, MD. Our agents nationwide use government purchased GPS unit to help them conduct security clearance interviews efficiently. Obviously, any interference causing delays in navigation will impact the productivity of the workforce resulting in delays in security clearance processing and increased cost to our Agency. The bottom line is that this can ultimately impact the security of the nation.

The integrity of the nation's GPS system is of paramount importance to the security of our country and should not be compromised, or even potentially compromised, for ANY reason, especially for the benefit of a private, for-profit enterprise.

Sincerely,

James Harrison

Dear Federal Communications Commission:

As you consider the conditional approval for LightSquared, I write to ask you to preserve the integrity of the nation's GPS system.

Last year, the federal government shut down the Loran navigation system, making recreational mariners solely reliant on GPS for all electronic navigation needs. Like so many other GPS users around the country, GPS is now integrated into our daily outings, and we look to the FCC to protect the integrity of the GPS signal.

Additionally, GPS is used for so many safety and security purposes that ANY interference with GPS signals is unacceptable. It is my assertion that the FCC should reject the LightSquared approval out of hand. Unless Lightsquared will provide a free exchange of compromised GPS equipment with new and unaffected equipment of equal or better capabilities, granting them any access to the broadband spectrum that will result in ANY interference with GPS signals should be disapproved. The rights of those of us who use GPS should not be sold out to give a private company more profits.

Sincerely,

David S Schwartzman
